

25TH ANNUAL PRODUCTION SALE

APRIL 15, 2021

**1:00 p.m. • at the ranch
one mile west of Kimball, SD**

www.MandEangus.com

25TH ANNUAL PRODUCTION SALE **THURSDAY, APRIL 15, 2021**

1:00 P.M. • AT THE RANCH
ONE MILE WEST OF KIMBALL, SD

www.MandEangus.com

Auctioneer:

Chisum Petersen..... 605-730-4214

Ringmen:

Lee Ness..... 605-680-2778

- Kimball Livestock Exchange

Jim Scheel 605-545-1521

- Cattle Business Weekly

Justin Dikoff..... 605-290-0635

- DVAuction

Schedule: 10:00 a.m. - Cattle on display

11:30 a.m. - Complimentary meal

1:00 p.m. - Sale begins

Video Auction: All bulls will be on video and will be available to see on our website – www.MandEangus.com. Live internet bidding will be available through DV Auction.

Announcements: Announcements made sale day take precedence over printed material in the sale catalog. Anyone attending the sale attends at their own risk.

Semen Check: Will be done before the sale. The bulls will also be poured and given a PregGuard, anthrax, and foot rot shot.

Liability: All persons attending the sale do so at their own risk. Kroupa Ranch assumes no liability for accidents or property loss that may occur.

Herd Health: All bulls have been on a complete vaccination program. They received Bovi-Shield GOLD 5, one shot of Pasteurella, and ULTRABAC 7. They had boosters in August and November. Bulls have tested negative to BVD. All work was done by Central Dakota Animal Clinic (Platte, SD).

Semen Interest: We reserve the right to collect semen for use in our herd, on all bulls sold. This will be done at our expense and the buyers convenience.

Trucking: We will deliver within 200 miles of Kimball by early-May. All bulls left at the ranch will be done at the buyer's risk. Buyers taking their bulls within a week of the sale will be given a \$50 discount.

Volume Discount: 3 bulls - 3%, 4 bulls – 4%, 5 bulls – 5%

Inclement weather or postponement: Listen to KMIT 105.9 radio

The Bulls will be penned for viewing but will not go through the sale ring on sale day.

Sale will be broadcasted on:
See Page 8 for details

Welcome to our 25th annual bull sale

Thank you for your interest in our program. The weather was beautiful this fall and the bulls have done very well. The bulls have been developed to promote longevity and good feet. Please notice the rib fat measurements on the bulls. The bulls will be semen checked and freeze branded before the sale.

We have not chased extremes. We have tried to balance the traits. Weight, in my opinion, should come from length, depth and width. The cows calve in the open with very little assistance.

Our entire cow herd, calves and bulls are on a complete vaccination program with Central Dakota Animal Clinic, Dr Jay Alberda.

We do not have a season long guarantee; however if you have a problem we have a problem. We want you to be happy.

Remember that bulls are in investment. Please care for them.

Thank you again to all of our customers, friends and family. We appreciate your faith in our herd and in us.

Sincerely, Marvin

A very nice Alternative Son out of a Tour of Duty cow that raised our high selling LD Capitalist 316 son in last year's sale. This bull is not only good looking in person but reads well in his EPD's as well as being in the top 10% of the breed for 6 different traits.

The Cowboy Up x Brilliance mating has treated me well. This bull is a month younger than the other CCC bulls, but don't overlook him with a 78 lb BW and an +8 CED EPD. He's border line calving ease.

FALL BULLS

Weaning weights were taken on April 28, 2020. Mature weights were taken on February 9, 2021. Scrotal measurements were taken on February 19, 2021.

American Angus Association \$Value Indexes

Dollar value indexes, or **\$Values**, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

American Angus Association

\$Values are multi-trait indexes expressed in dollars per head to assist commercial beef producers by adding simplicity to genetic selection decisions. A \$Value has meaning only when used in comparison to the \$Value of another animal. For example, just as with EPDs, variation in \$Value between animals indicates average expected differences in the relative value of progeny if random mating is assumed and the calves are exposed to the same environment.

How do I use them?

\$Values should be used to compliment the criteria that producers already use when selecting bulls. The \$Values are not designed to be driven by a single trait, as an index is multi-trait by design. These selection tools are the result of the application of industry relevant market values to Angus genetics for preweaning, feedlot and carcass merit.

The \$W, \$F, \$G and \$B values on individual animals and the Sire Evaluation Report may be viewed at www.angus.org.

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), an index expressed in dollars per head, provides the expected difference in future progeny preweaning performance from birth to weaning. \$W assumes that producers retain 20% of their female progeny for replacements and sell the rest of their cull female and male progeny as feeder calves. Over time, increased selection pressure on \$W will increase pre-weaning growth through additional weaning weight and maternal milk with expenses adjustment for mature size and maternal milk.

Beef Value (\$B), an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

Combined Value (\$C), an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.
